Yes, this is the concrete. Gene, do you know of any others?

Verneta:

I'm working on a response to the Cubbage's 2/14/08 letter and I want to reference all the times STS has encountered contaminated material at DuSable in addition to the 5 areas we knew about in 2002. Is the below email the one where Kornder notified us of the hot material below the concrete slab?? I cannot remember. If it's not, can you find that email?

Here's what I have with respect to additional contamination discovered by STS since they've been out there in 2007:

October 2007 - STS found area under concrete slab, removed and Tronox took off site  
March 10, 2008 - STS found what they first referred to as brick - very hot material - but all removed through soil sampling  
March 26, 2008 - STS found 10 x 10 foot area - fenced off the area.

Thanks for your help! Cathy

Subject DuSable Park - Radiological Screening Results

Good Afternoon:

I just spoke with Verneta and per her suggestion I am forwarding this email.

Yesterday, at the DuSable Park STS discovered a small area (9 X 12 ft) which exhibited maximum gamma readings in the range of 40,000 cpm and 76,000 cpm. Unfortunately, this area is located in a ramp construction area and we would like to move forward quickly with its remediation (i.e., potentially early next week). As such, I thought that it would be appropriate that we have a discussion (phone call) regarding the discovery and the proposed remedial activities. I realize that Verneta is in the field today and tomorrow, but from my conversation with her earlier today, she thought that she would be available around noon.

Please let me know if it is possible to schedule a call for tomorrow, but in the meantime feel free to contact me if you have any questions.

Sincerely,  
*Steve Kornder*
